**Announcement on the Release of the Newest OS Windows 7 Supported
New Version of the eChart “@homeDr. (At home doctor)” Designed for Clinics**

FALCO biosystems Ltd. hereby announces that it will launch “@homeDr. (At home doctor)” Version 1.0 Release 4.0, an electronic medical chart for clinics with enhanced functions compatible with the newest operating system Windows 7.

The latest improvements made are as follows:

1. Among the first eChart compatible with the newest OS

1) Windows 7 supported

It is among the first to have become compatible with Windows 7 which offers more comfortable and better user interface.

2. Improved viewing

1) Improved scrolling

Consecutive reference of multi-page chart by scrolling has become easier with further improved viewing.

2) Search function

Reference of the history of each medical action, such as medication or clinical testing, has been enabled.

3) In addition to the above, change of chart screen layout and other improvements of viewing have been achieved throughout the software.

3. Improved operability

1) Drag & drop function

Drag & drop function has enabled multiple selection of test items, medications and other information of past charts, so you can specify what you want more precisely. This function also allows easy paste of medical findings, medication history, history of injuries and diseases and images in charts or patient referral documents.

2) Enhanced “Chart Set” and “Order Menu” setting function

It has been one of the features of @homeDr. that you can edit or layout “Chart Set” and “Order Menu” buttons as you like. Now you can do it more easily.

3) Strengthened scanning function

Continuous import of multi-page past charts, referral form from other medical institutions and other documents into @homeDr. is now available. Also, you can directly import images from scanner into the medical findings section of @homeDr.

4) Other improvements in screen transition and so on have been achieved for improved operability.

4. Additional functions

1) Image paste in issued documents

Paste of images is now available as an additional function of issued document control, which allows issuance of medical certificates, patient referral documents and so on.

2) Link with drug information database

By linking with drug information database, it offers function to check interaction and maximum dose, as well as recommended dose and amount per unit, after taking into account medication indications, names of diseases that correspond to contraindication and past medication history.

3) Automatic download of updated programs/data

Compared with CD-ROM and other media, it automatically updates programs, disease name master and drug information data more quickly and certainly, alleviating time-consuming updates.

5. Improved reliability

1) Double data backup

In addition to the existing backup function, real-time data registration/update on two computers enhances safety because loss of data will be minimized even in case of computer breakdown.

6. Period of service

Sales will start on June 21, 2010.

7. Target service sales

We aim to sell 600 sets in the next three years.
